

Gabriel Souza

Backend Developer

gabrielmarliere2005@gmail.com | linkedin.com/in/gabrielmsa | github.com/Gabrielmarlier3 | Belo Horizonte, MG, Brazil

PROFESSIONAL SUMMARY

Backend developer with experience in critical integrations, automation, and financial systems in production. Technical background in TypeScript, Node.js, NestJS, and Go, with a focus on authentication, session management, payment integrity, and incident diagnosis. Maintains shared libraries, coordinates changes across services, and uses AI development tools with code review and technical validation.

CORE COMPETENCIES

HTTP integrations

Authentication and sessions

Payment integrity

Shared libraries

Production diagnosis

AI-assisted development

WORK EXPERIENCE

Devnology

October 2024 to present

Backend Developer

Belo Horizonte, MG, Brazil | Remote

- Develop and maintain TypeScript and Node.js integrations for airline ticketing using loyalty miles, adapting contracts, sessions, and error handling as external services change.
- Implemented HTTP authentication flows, including an 11-step MFA process, cookie management, and integration with OAuth and Auth0 providers.
- Maintain an internal npm library shared by ticketing services, centralizing transport, sessions, and failure recovery while coordinating backward-compatible updates across consumers.
- Extended post-payment verification and idempotent recovery mechanisms, moving financial integrity rules from individual automations into the shared library and orchestration layer.
- Created two query dashboards in Grafana and regularly use Grafana Loki to analyze logs and diagnose incidents. Investigate failures through traffic analysis and tracing across services, driving fixes and rollbacks based on observed production behavior.
- Developed integrations and parsers in Go within an existing architecture, including exchange rate functionality with persistence, caching, and bid and ask rates.
- Organize AI-assisted development through specifications, agent rules, MCP tools, and code reviews. Contribute reusable abstractions to a family of Go services.

Stake Together

July 2023 to July 2024

Backend Developer

Belo Horizonte, MG, Brazil | Remote

- Developed and maintained backend systems with TypeScript, NestJS, and Sequelize for a decentralized financial product.
- Collaborated with the team using GitHub and technical communication in English, building knowledge of blockchain and smart contracts.

SELECTED PROJECTS

Reliability in ticketing orchestration

Helped resolve a race condition across services by assessing a lock-based safeguard, rolling it back after an incident, and validating an idempotency guard. The work included manually adjusting terminal state rules with tests as part of an AI-assisted development process.

TypeScript, MySQL, Redis

Shared abstractions for Go validation services

Contributed to a shared kit, service template, and booking validation gateway built on a foundation created by another developer. Organized AI-assisted implementation of integrations for additional airlines, with generation rules and resource limits.

Go, HTTP integrations, gateway

Internal tools for AI-assisted development

Created MCP tools for task standardization and an investigation workspace with read-only access to production. Defined agent rules and operational constraints to guide implementation and support review of generated code.

MCP, Claude Code, technical documentation

EDUCATION

Bachelor's Degree in Computer Science (in progress)

Faculdade Newton Paiva

Belo Horizonte, MG, Brazil. Started in 2023; expected graduation in the second half of 2027.

TECHNICAL SKILLS

Programming languages: TypeScript and Go.

Backend: Node.js and NestJS.

Integrations: HTTP, OAuth, Auth0, MFA, cookies, sessions, and Puppeteer.

Data: MySQL, Redis, migrations, Sequelize, TypeORM, and GORM.

Operations: Docker, GitLab CI, PM2, and application operations on AWS EC2/ECS.

Observability: Grafana, Grafana Loki, log queries, dashboard creation, and incident diagnosis.

Validation and tools: Jest, Go testing, MCP, and Claude Code.

LANGUAGES

English: experience communicating on technical topics in a professional setting.
